Amphi-tech[®]

The security hatch for drinking water reservoirs

Function

A plant with content worth protecting should be secured against external influences. If the plant contains drinking water, leaks should be avoided to prevent contamination. Amphi-Safe RC3 security hatch prevents sabotage against protected sites. The hatch is designed as an airtight barrier against penetrating contaminants.

Technical data

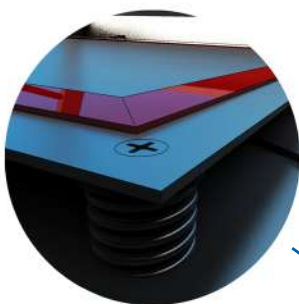

Acid-proof steel, EN 1.4404
Hidden, burglary protected parts
Food safe materials
Security classified according to SS-EN 1630: 2011 + A1: 2016 RC3
Weather and sabotage protected lock
Double plate barriers

Additional options
